

Kernaro AI (Beta)

Beta ends in 1 day.

ChatAgent Executions

What is the name of current repository?

1.4 Profile ← Heading 2

2. Assets Structure - Perspectives - Views ← Heading 1

2.1 APV ← Heading 2

2.2 APV-pb ← Heading 2

[Diagram] APV-pb

...and so on for all 11 root models

Estimation

| Factor | Estimate | |-----|-----| | Document size | ~5–10 KB Word file | | Script complexity | Low – small fixed dataset | | Generation time | ~30–60 seconds | | Tokens consumed | ~3,000–5,000 tokens (script generation + execution) | | Estimated cost | ~\$0.02–\$0.05 USD |

Approach

1. Script-agent runs a JScript in EA to export the package/diagram structure to JSON

2. File-agent uses Python + python-docx to build the Word document with:

Title paragraph

TOC field (updatable in Word via right-click → Update Field)

H1 for root packages, H2 for level-2 packages

Normal style for diagram names

Shall I proceed? Please approve using the buttons below.

To: 01.STH-Roman Kazicka <Roman.Kazicka@SystemThinking.xyz>

Hi Roman,

Thank you for sharing such detailed and thoughtful feedback—it's great to hear how excited you are about the potential of Kernaro.

We're really glad to see it supporting your exploration around modeling, taxonomy, and ontology, and it's especially encouraging to hear your perspective on its impact across the broader SDLC and SSOT/TSSOT approach.

I've shared your feedback with our team, and they truly appreciate your insights.

Considering that you haven't yet had the opportunity to explore features like Agents, we're happy to extend your Kernaro Assist beta access until **April 30th**. This should give you additional time to continue your evaluation and experiment further.

Please use the link below to download the latest beta version:
[\[Kernaro Assist Beta\]](#)

Kindly note that the download link will be valid for 3 days.

Looking forward to seeing your continued exploration—and your LinkedIn article as well!

If you need any support in the meantime, feel free to reach out.

Kind regards,
Hari

Subject: Re: Kernaro Assist for EA Beta Now Available

Hi Hari,
I am excited!!!!
It is magic.
I wanted to make use last day of beta.
I have tried just the chat, no time for agents, but I am really excited.
This is revolution in modelling. But I am aware, that it will lead to higher requirements on the quality of the model, on TAXONOMY and ontology. Like TBM for TAXONOMY, and proprietary role based ontology. I will prepare short article in Linked In during weekend.
I have created Claude Console account 20 USD credit. And I have started with small prompts like how many packages are in the model and compare with statistics.
Then I have define prompt to generate Document with Diagram only, but there is 5000 pcgs with 4734 diagram....
To big for first steps,
So I have reduced the task for root packages up to level 2.

I will do my best to promote this approach inside CSOB (new owner of 365), however there is small chance to manage. CSOB is focused on the migration 365 into CSOB only. It will be very tough to change, or extend the scope. We will see.

But there are 3 top bank at Slovakia, which are already using AI at Call centers, and even on premise solution with NVIDIA card for voice to text use case.

560 hour of voices per day !!! Sparx systems supports the whole SDLC process, 100+ of people, 20+ roles from business, TLA, Analysis, design, development change management and delivery up to operation.

With Lieber Lieber's Lemontree it is one ecosystem with all profession tools integration (JIRA, Service Now, DevOps, Confluence, Sharepoint, GitHub, Bitbucket...).

I am really impressed a lot. I see huge potential for Supportig SSOT /TSSOT (Single Source of truth, /Trusted SSOT).

Some people at EA level are fascinating by Architecture as a Code (based on Structurizr), but it is **not Architecture as a code**, but **Deployment diagram as a code**.

- Visualisation output from DynaTrace.

Kernaro is absolute different level of new Architecture Management.

And competitors a far behind. e.g. Bizdesign doesn't support active creation artefacts in models and the price is at least 5X higher and supports only CxO level in SDLC.

I will continue tomorrow, to record some scenarios for article in Linked IN.

thank You very much for the so powerful tool...

"Just" to find the right customers with right mindset.

Kind regards

Roman

Hi Roman,

Thank you for the update.

Please take your time to complete the setup and explore Kernaro. If you run into any issues or need assistance during the process, feel free to reach out—I'll be happy to help.

Looking forward to hearing your feedback once you've had a chance to try it out.

Kind regards,

Hari

Subject: Re: Kernaro Assist for EA Beta Now Available

Hi Hari

unfortunately not yet. I need to arrange my API on Claude, or OpenGPT. I hoped I will be able to do via 365 bank, but, it was too optimistic.

I will try tonight, tomorrow, and try a little bit to get feeling about KERNARO.

Thank You

kind regards

Roman

Hi Roman,

Hope you're doing well. I wanted to check if you've had a chance to install Kernaro Assist

(Beta). If so, we would greatly appreciate any feedback you can share on your experience with the tool.
If you're facing any challenges with the installation, please feel free to reach out—we'd be happy to assist you.
Looking forward to your response.
Best regards,
Hari

Subject: Kernaro Assist for EA Beta Now Available

Hi ,

Exciting news — **the Beta version of Kernaro AI for Sparx Systems Enterprise Architect is now available!**

You can **download and explore** it here: [KernaroAssist](#)

Please note: this download link will expire in 3 days, so we recommend accessing it at your earliest convenience.

Kernaro Assist is designed to enhance how you work within Enterprise Architect, bringing AI-driven assistance directly into your workflow. With this beta, you can explore capabilities such as:

1. AI-assisted model creation and refinement
2. Intelligent suggestions to accelerate model and documentation
3. Improved productivity through contextual insights within EA
4. Streamlined interaction with your architecture data

The **beta program** will be available until **17th April 2026**. After this period, the beta version will be **automatically terminated**, so feel free to explore it and share your feedback in the meantime.

If you'd like to learn more about the features and capabilities, click [here](#).

Let me know if you have any questions or need any support getting started.

Best,
Kernaro Team
