|                  | <p>🤔 Why do so many organisations have architecture models in place, yet struggle to use them effectively in day-to-day work? 🤔</p> <p>This is exactly where Kernaro Assist comes in: the AI extension for Sparx Systems Enterprise Architect works directly within the live repository, enabling users to analyse, create, edit, and manage models using natural language. <sup>↑</sup> TOP</p> <p>The value is clear:</p> <ul style="list-style-type: none"><li>✅ Kernaro Assist understands your modelling context</li><li>✅ Fully aligned with your modelling standards</li><li>✅ Speed up the creation of diagrams and models</li></ul> <p>AI becomes not just an add-on, but a true driver of efficient architecture work and better use of existing models.</p> <p>Read more about Kernaro Assist 📌 <a href="https://lnkd.in/dj3Qgw8N">https://lnkd.in/dj3Qgw8N</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 17.04.2026 12:15 | <p>[20260417-1211] KERNARO je propagované na LI cez Sparzsystems EU. Práve testuje, beta verziu a som nadšený. Chcel by som reagovať v mojom duchu podory rolí v rámci celého SDLC, Context Aware Approach, Porozumenie, zníženie nákladov, zvýšenie kvality. Ale zároveň mi testovanie potvrdzuje, že AI nikde nenahradí systematický prístup kľúčových rolí v SDLC, Dôsledná taxonómia, ontológia na základe rolí, okamžité zdieľanie znalostí cez všetky dotknuté roly pomocou interoperability technológií Posielam LI príspevok, Prosím navrhni krátku odpoveď podľa môjho návrhu s referenciou na to, že doplním detailnejšie úkážky z stetovania 🤔 Why do so many organisations have architecture models in place, yet struggle to use them effectively in day-to-day work? 🤔</p> <p>This is exactly where Kernaro Assist comes in: the AI extension for Sparx Systems Enterprise Architect works directly within the live repository, enabling users to analyse, create, edit, and manage models using natural language. <sup>↑</sup> TOP</p> <p>The value is clear: ✅ Kernaro Assist understands your modelling context ✅ Fully aligned with your modelling standards ✅ Speed up the creation of diagrams and models</p> <p>AI becomes not just an add-on, but a true driver of efficient architecture work and better use of existing models.</p> <p>Read more about Kernaro Assist 📌 <a href="https://lnkd.in/dj3Qgw8N">https://lnkd.in/dj3Qgw8N</a></p> |  |
|                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
